

Autism Research Study

WHO WE ARE: A team of researchers from the Developmental Medicine Center, the Division of Genetics, the Department of Neurology, and the Program in Genomics, collaborating with the Simons Simplex Collection and the Autism Consortium

WHAT WE DO: Collect phenotypic and genetic data on children aged 24 months and up, diagnosed with Autism Spectrum Disorders (ASD) and their families

GOALS: To better understand ASD for earlier diagnosis and better treatment

WHAT YOU CAN DO: Spread the word. Please refer your interested families to our research study at 866-982-5826
